Summary

Whilst studying veterinary medicine, I was introduced to programming by a close friend. I have always been curious about software development, but after taking a course and creating a Snake game from scratch, I was totally hooked. I found myself doing something I really loved.

Since being introducing to programming, I have taken multiple courses to improve my skills and get better every day and have created a portfolio of applications.

Skills

- JavaScript
- React
- Node.js
- HTML5
- CSS3
- Git

Projects

Portfolio

→ I created my own portfolio using React.

Streaming Video

→ I created a Streaming Video App using react. This application streams your own streaming using a RTMP server, and allows you to create, edit or delete your streams using Google Auth.

Travel App

→ I developed a travel application using JavaScript, NodeJS and Webpack. This application uses the information incoming from the user to displays some information about the trip.

Natural Language Processing App

→ I developed a news article sentimental analysis web application using a Natural Language Processing API. This project was made using JavaScript, NodeJS and Webpack.

Weather Journal App

→ I created a Weather Journal App that allows user to get the actual weather from a place using the zip code from this place.

Snake Game

→ This is my very first project. I created a Snake game from scratch using Vanilla JavaScript.

Education

UDACITY

Online Front-End Web Developer Nanodegree – *February 2020.*

COURSES TAKEN

o Modern React with Redux.
o Git Complete.
o Intro to Node.js and Express.
o Development and Publication of Web Applications.
